The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (previously presented) A ceramic structure comprising a first phase $\text{Cs}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot 4\text{SiO}_2$ (CAS_4), a second phase $\text{Cs}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ (CAS_2), and a third phase selected from the group consisting of $\text{SrO} \cdot \text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ (SAS_2), $\text{SrO} \cdot \text{SiO}_2$ (SrSiO_3) and combinations thereof, wherein the ceramic has a high thermal expansion anisotropy of between 1400-1450 ppm, as calculated from dimensional change $\Delta L/L_0$ over a temperature range from room temperature to 1000°C, and an average coefficient of thermal expansion from room temperature to 1000°C of $-10 \times 10^{-7}/^\circ\text{C}$ to $+25 \times 10^{-7}/^\circ\text{C}$.

2. (original) The ceramic structure of claim 1 wherein the average coefficient of thermal expansion from room temperature to 1000°C is about $-5 \times 10^{-7}/^\circ\text{C}$ to $+15 \times 10^{-7}/^\circ\text{C}$.

3-6 (cancelled)

7-10 (cancelled)

11. (original) A diesel particulate filter comprising a highly refractory ceramic having a first phase $\text{Cs}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot 4\text{SiO}_2$ (CAS_4), a second phase $\text{Cs}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ (CAS_2), and a third phase third phase selected from the group consisting of $\text{SrO} \cdot \text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ (SAS_2), $\text{SrO} \cdot \text{SiO}_2$ (SrSiO_3) and combinations thereof, wherein the ceramic has a high thermal expansion anisotropy from room temperature to 1000 °C and an average coefficient of thermal expansion from room temperature to 1000°C of $-10 \times 10^{-7}/^\circ\text{C}$ to $+25 \times 10^{-7}/^\circ\text{C}$, wherein the diesel particulate filter comprises a honeycomb body, the honeycomb having an inlet end and an outlet end and a multiplicity of cells extending from the inlet end to the outlet end, the cells having porous walls, wherein part of the total number of cells at the inlet end are plugged along a portion of their lengths, and the remaining part of cells that are open at the inlet end are plugged at the outlet end along a portion of their lengths, so that an engine exhaust stream passing through the cells of the honeycomb from the inlet end to the outlet

end flows into the open cells, through the cell walls, and out of the structure through the open cells at the outlet end.

12. (original) The diesel particulate filter of claim 11 wherein the average coefficient of thermal expansion from room temperature to 1000°C of $-5 \times 10^{-7}/^{\circ}\text{C}$ to $+15 \times 10^{-7}/^{\circ}\text{C}$.

13. (previously presented) A method of producing a formable mixture, the method comprising combining a dry blend material consisting essentially of 70-90 %, by weight, of a glass frit, consisting essentially, expressed in weight percent on an oxide basis, of 60-68 % Cs_2O , wherein a portion of Cs_2O is substituted with SrO , wherein up to 30 % by weight SrO is substituted for Cs_2O , 29-35 % SiO_2 , and optionally 3-5 % Al_2O_3 , and 10-30 %, by weight, Al_2O_3 , a solvent selected from the group consisting of deionized water, an emulsion consisting essentially of, about 95 % , by weight, deionized water, about 0.7 % , by weight, triethanolamine and about 4.3 % , by weight, oleic acid, and combinations thereof, and a polymer selected from the group consisting of a crosslinked polyacrylic acid copolymer, a polyethylene oxide polymer, and combinations thereof.

14. (original) The method of claim 13 wherein the polymer is a crosslinked polyacrylic acid copolymer.

15. (original) The method of claim 13 wherein the glass frit consists essentially, expressed in weight percent on an oxide basis, of 60-68% Cs_2O , 29-35% SiO_2 , and optionally 3-5% Al_2O_3 .

16. (original) The method of claim 13 wherein up to 2 %, by weight, Li_2O is substituted for Cs_2O .

17. (original) The method of claim 13 wherein up to 30 %, by weight, SrO , is substituted for Cs_2O .

18. (original) The method of claim 17 wherein the polymer is an aqueous-based cellulose ether polymer.

Appl. No.: 10/045,256
Amdt. Dated: 4/6/04
Reply to Notice of Allowance of: 2/17/2004

19. (original) The method of claim 18 wherein the aqueous-based cellulose ether polymer is selected from the group consisting of methylcellulose or hydroxypropyl methylcellulose.

20. (previously presented) The method of claim 19 wherein the solvent is an emulsion consisting essentially of, about 95 %, by weight, deionized water, about 0.7 %, by weight, triethanolamine and about 4.3% by weight, oleic acid, and the polymer is methylcellulose.

21. (original) The method of claim 13 comprising the additional step of shaping the mixture by extrusion into a monolithic structure.

22. (original) The method of claim 21 wherein the mixture is shaped by extrusion.

23. (original) The method of claim 22 wherein the mixture is extruded into a honeycomb.

24. (previously presented) A method of making a monolithic structure for high temperature filtration applications, the method comprising:

a) forming a mixture comprising:

i) about 50-85%, by weight, dry blend consisting essentially of:

1) 70-90%, by weight, of a glass frit consisting essentially, expressed in weight percent on an oxide basis, of 60-68% Cs_2O wherein a portion of Cs_2O is substituted with SrO , wherein up to 30 % by weight SrO is substituted for Cs_2O , 29-35% SiO_2 , and optionally 3-5% Al_2O_3 ; and,

2) 10-30 %, by weight, Al_2O_3 ; and,

ii) 15-30 %, by weight, of a solvent selected from the group consisting of deionized water, an emulsion consisting essentially of, about 95 %, by weight, deionized water, about 0.7 %, by weight, triethanolamine and about 4.3% by weight, oleic acid, and combinations thereof;

iii) 0.1-8%, by weight, of a polymer selected from the group consisting of a crosslinked polyacrylic acid copolymer, a polyethylene oxide polymer, and combinations thereof; and,

iv) 0-25%, by weight, of a pore former;

b) shaping the mixture to form a green body; and,

Appl. No.: 10/045,256

c) firing the green honeycomb structure in an electric furnace at a temperature of about 1350 to 1550°C over a period of about 6 to 12 hours, and held at a maximum temperature for about 4 to 12 hours to form a fired structure comprising ceramic having a first phase $\text{Cs}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot 4\text{SiO}_2$ (CAS_4), a second phase $\text{Cs}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ (CAS_2), and a third phase third phase selected from the group consisting of $\text{SrO} \cdot \text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ (SAS_2), $\text{SrO} \cdot \text{SiO}_2$ (SrSiO_3) and combinations thereof.

25. (original) The method of claim 24 wherein dry blend consists essentially of about 85%, by weight, glass frit and about 15%, by weight, alumina.

26. (original) The method of claim 24 wherein up to 2 %, by weight, Li_2O is substituted for Cs_2O .

27. (original) The method of claim 26 wherein the polymer is added at 0.1-4%, by weight.

28. (original) The method of claim 27 wherein the polymer is crosslinked polyacrylic acid copolymer.

29. (original) The method of claim 24 wherein up to 30 %, by weight, SrO , is substituted for Cs_2O .

30. (cancelled)

31. (currently amended) The method of claim ~~30~~ 24 wherein the aqueous-based cellulose ether polymer is selected from the group consisting of methylcellulose or hydroxylpropyl methylcellulose.

32. (previously presented) The method of claim 31 wherein the solvent is an emulsion consisting essentially of, about 95 %, by weight, deionized water, about 0.7 %, by weight, triethanolamine and about 4.3% by weight, oleic acid, and the polymer is methylcellulose.

33. (original) The method of claim 24 wherein the pore former is graphite.

Appl. No.: 10/045,256

Amdt. Dated: 4/6/04

Reply to Notice of Allowance of: 2/17/2004

34. (original) The method of claim 24 wherein the mixture is shaped by extrusion into a honeycomb structure having an inlet end and an outlet end and a multiplicity of cells extending from the inlet end to the outlet end, the cells having porous walls.

35. (original) The method of claim 34 wherein every other cell is plugged to form a wall-flow filter.
